Femoropopliteal stent fracture with recurrent in-stent occlusion and pseudoaneurysm

Donghoon Choi, MD, PhD

Severance Cardiovascular Center, Yonsei University College of Medicine

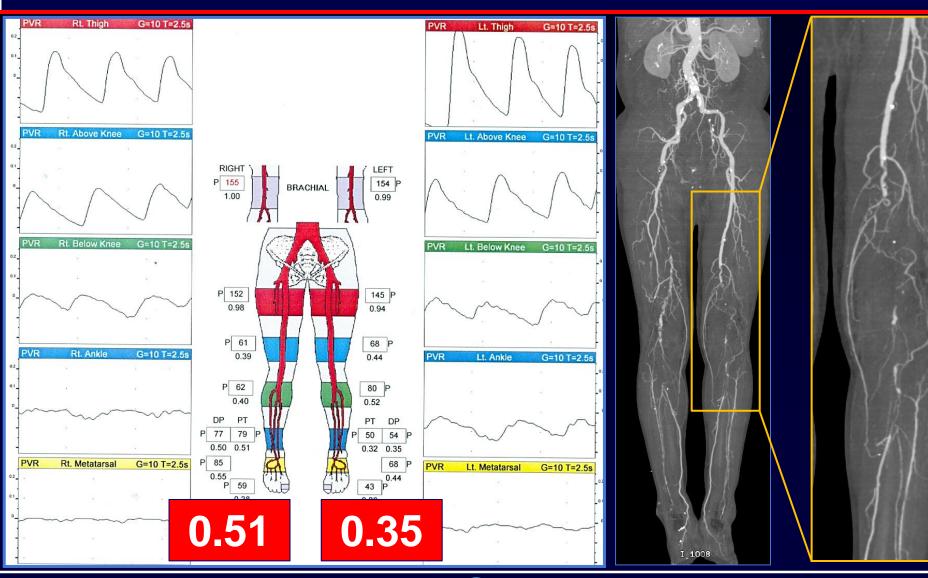

Case

- 71 / M
- Chief complaint:
 Claudication, both (Rutherford 3)

- Comorbidities:
 - Coronary artery disease
 - Diabetes mellitus
 - Hypertension
 - Dyslipidemia

CT and ABI

PTA

Initial angiography

- Antegrade approach
- 035 hydrophilic Terumo wire
- Savvy long 3 x 150mm PTA balloon

PTA

3 month Follow-up CT

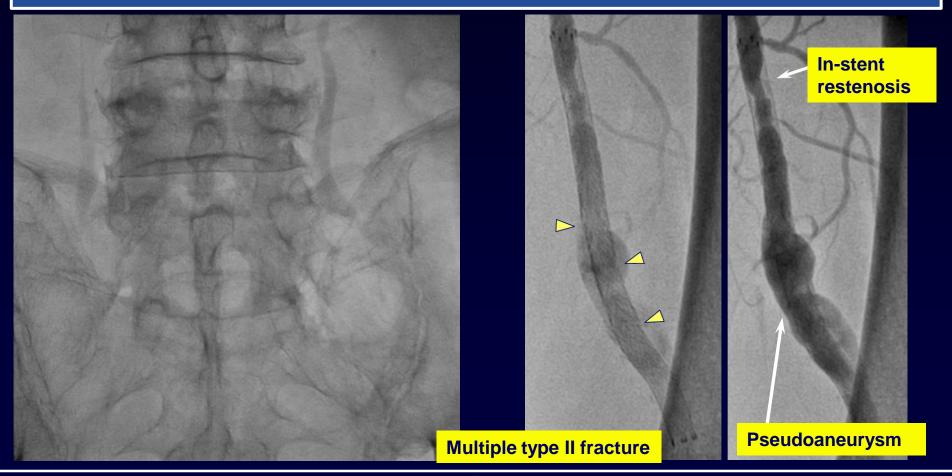

Previous stent maintained patency without aneurysmal changes

7 month FU angiography

Follow up examination of left femoral stent was performed during percutaneous coronary intervention. Patient was asymptomatic.

13 month FU angiography

The patient complained severe claudication (Rutherford 3).

13 month FU angiography

After balloon angioplasty Final angiography

2 yr FU angiography

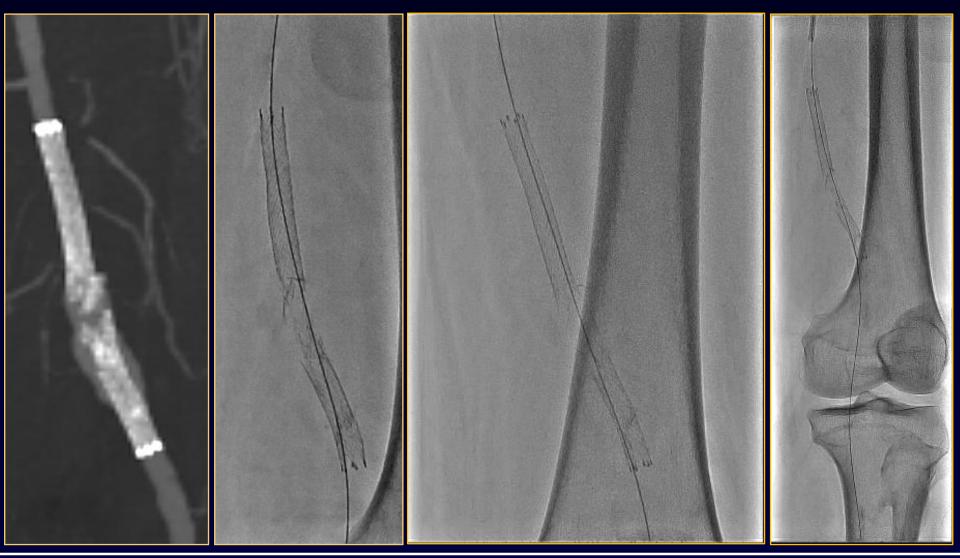

The patient re-complained severe claudication (Rutherford 3).

Stent fracture (type V) with complete dislocation and pseudoaneurysm

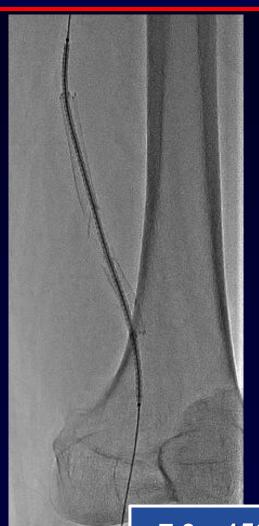

2 year Follow-up

2 year Follow-up

7.0 x 150 mm Viabahn stent

Final angiography

2 m FU CT after Viabahn stent

Summary

 Stent fractures may potentially lead to various serious complications.

 In the present case, stent fracture with recurrent in-stent occlusion and pseudoaneurysm was successfully treated with self-expandable endovascular stent graft.

Crushed stent with acute occlusion in superficial femoral artery after enhanced external counter pulsation

최동훈 연세의대

60/F

C.C: Left leg resting pain with claudication

Duration: 2 weeks

Past history

- 2009. 11. Left claudication Op for herniated lumbar disk
- 2010. 2. 9 Lt. SFA total occlusion, balloon angioplasty
- 2010. 10. 11 Lt. SFA restenosis, stent insertion
- Hypertension essential
- Dyslipidemia
- Old pulmonary Tbc

First balloon angioplasty (10.2.9)

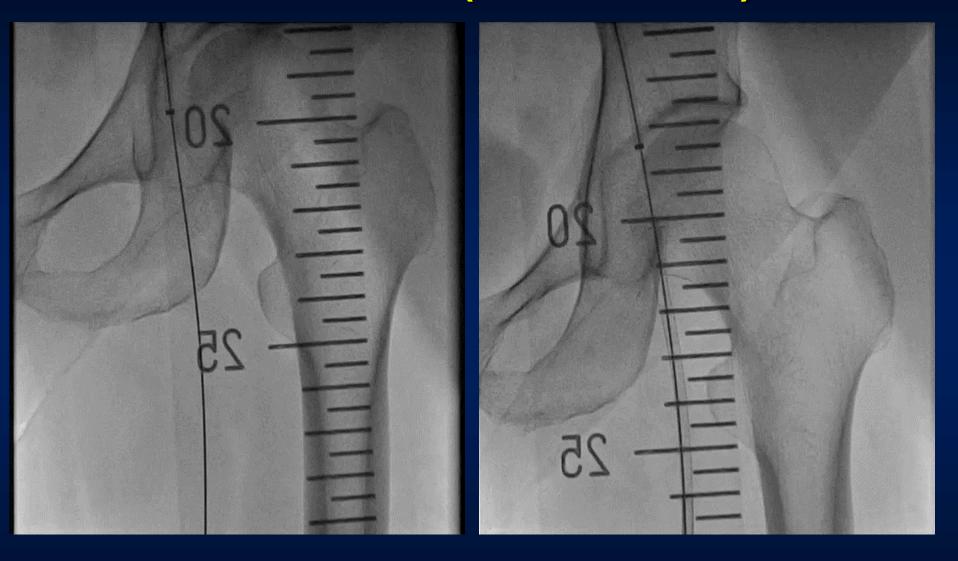

Total occlusion of left SFA

After balloon angioplasty

Restenosis (2010. 10. 11)

Total occlusion of left SFA previously treated by angioplasty → Overlapping proximal 6x80mm and distal 6x150mm SMART®

later)

Peripheral Angiography

Crushed stent with total occlusion in left SFA

Crushed stent...???

After meticulous history taking

동네 정형외과 갔더니 관절에 좋다고 그래서 했는데 하고 나니 다음 날부터 다리가 너무 아프더라......

Fem to pop bypass surgery
